

Addend Analytics enables a packaging solution company based in Denmark to increase its operational efficiency and revenue using Microsoft PowerApps and Power Automate

Client: Packaging Machinery Supplier

Industry: Packaging Solution

Country: Denmark

Technology: Microsoft Power Apps & Power Automate (formerly Microsoft Flow)

About the company

The company has been a steady provider of packing solutions to the industry all over Europe since 1995. They count their clients from various segments of the industries like pharmaceutical, healthcare, food, and cosmetics. They are more recognized uniquely for building production lines or units for tablet counting-liquid filling - automatic placement machines and packaging solutions. Business Challenge

The client has their fleet of field service technicians serving across the different regions for repair and maintenance tasks. During their course of work, it was advisable for the field workers to capture their time of client visit. However, they would often forget to log their timings accurately. The failure to mark the timings in absence of any system would create problems in the schedules later. It also resulted in logging in a lesser number of hours, thereby resulting in revenue loss for the client.

Solution

To fix the problem, the Addend Analytics team introduced automation in their operations. The client was using excel as their official log, which was replaced by the digitized platform. With this, the need for manual entry into the excel log was eliminated and substituted by automation using Microsoft Power App and Power Automate.

Post Go-live

The client successfully went live with the new platform around April 2021.

In just a few days, the client could resolve their everyday complications related to the field operations which directly resulted in the **elimination of the revenue losses by 20%.**

Technology Used

Addend Analytics used Microsoft Power Apps and Power Automate, reinforcing its presence as a strong emerging leader in data analytics and business solution

Solution Screenshots

A screenshot of the 'Service Information' form in a mobile app. It shows a table with columns: Customer, Service report no, Hourly Consumption, Start Date of Execution, and End Date of Execution. The first row contains data for 'Tellusvitae'.A screenshot of the 'Time Registration' form. It includes fields for Machine (Automatic Press-on Capper), Task (Cleaning), Start Time, End Time, Total (6.0), and Replaced parts. There is also a 'Notes' section with a 'Testing Click image' button and a 'Testing Notes' section.A screenshot showing the 'Time Registration' form on the left and a 'Notes' form on the right. The 'Notes' form has a 'Description' field, a 'Parts' dropdown menu (showing 'HP HD Camera'), and a photo of a camera.A screenshot showing a 'Customer' list table on the left and a 'Customer' form on the right. The table lists customers with columns: Customer No, Customer Name, Tlf./Fax, Attention Name, and There. The form on the right has fields for Customer No, Customer Name, Tlf./Fax, Attention Name, There Ref., Email, Group, and Postnr.
